PROJECTS

Hospital Management App

Appointments, Prescription, SpringBoot, React, PostgreSQL

08/2025 – 10/2025

Hospital Management System- A full-stack web application designed to digitize and automate core hospital operations. The system enables management of patients, doctors, appointments and admins through role-based access. Built with a **Java Spring Boot backend and React(frontend) + PostgreSQL** relational database, it streamlines tasks such as patient registration, appointment scheduling, upload prescriptions — replacing manual, paper-based hospital processes. It is a team project.

Career_Sync

A Job Portal, MERN, JWT

Career_Sync is a web platform that connects job seekers with companies looking to hire. Companies can sign up, get approved by an admin, and post job openings. Job seekers can create profiles, browse available jobs, and apply to positions that match their interests. The system ensures secure login and smooth interaction between companies and applicants, making the hiring process easier for both sides. It is a team project. You can see the project here. 

CineMatch

Movie Recommendation App, Flutter, SpringBoot

10/2025 – 10/2025

Movie App  — A Flutter-based movie discovery app with Spring Boot backend and Supabase database. Features include movie search, detailed movie info, user login, and mood-based recommendations using the Gemini API. Includes a custom movie-focused Gemini chatbot, bilingual support (Bangla & English), and dark/light themes for improved user experience.

ClearAid

Donation System, ReactJs, Firebase

11/2024 – 03/2025

ClearAid is a web-based NGO management system designed to be a central hub for NGOs and donors. It allows NGOs to post projects, track donations, and recruit volunteers, while enabling people to donate anonymously to causes without requiring an account. ClearAid aims to simplify the donation and volunteer process by providing transparency and ease of use. It is a team project. *You can see the project here.* 

BookPlanGo

Booking Management System, Java

09/2024 – 04/2025

BookPlanGo is a comprehensive solution designed to simplify tour planning and booking management. This system provides users with the ability to make reservations for hotels and cars, plan tours, track expenses and receive personalized trip suggestions based on their destination. It is made using Java. It is a team project.
